

The image shows the Cisco Packet Tracer application window. The main workspace displays a network topology with a central 2960 24TT Switch connected to a Server-PT (Server1) and three PC-PT devices (PC0, PC1, PC2). The IP addresses for the devices are: Server1 (192.255.10.90), PC0 (192.255.10.91), PC1 (192.255.10.96), and PC2 (192.255.10.92). The right-hand panel contains the Simulation Panel, which includes an Event List, Play Controls, and a list of visible events. The Event List shows a sequence of events from 0.000 to 0.004, with the last event being a packet capture on the switch. The Play Controls section includes buttons for Reset Simulation, Constant Delay, and Captured. The bottom status bar shows the time as 00:23:20.46, the temperature as 35°C, and the date as 07/08/2025.

Simulation Panel

Event List

Vis.	Time(sec)	Last Device
0.000		
0.001		PC0
0.002		Switch0
0.003		Server1
0.004		Switch0

Reset Simulation ☒ Constant Delay Captured 1 0.004
